Supply Shortage Pushes Rents High

The Twin Cities multifamily market remains one of the strongest in the Midwest, leading in rent growth and featuring high occupancy rates and healthy population gains. The metro boasts a diverse and steady economy, with opportunity for continued growth.

Although total job growth in the metro trails the national average, sectors such as education and health services, as well as professional and business services, outperformed with the addition of more than 27,000 jobs last year. Local universities provide skilled workers to a variety of employers, including consumer product giants Target and Best Buy, and the world-renowned medical research institute Mayo Clinic. The leisure and hospitality sector suffered significant employment losses in 2016, despite the fact that the metro is preparing to host some major events, such as the 2018 Super Bowl.

Rent growth exceeded the national average over the last year, due to steady employment gains, an increasing population and limited housing supply, as apartment completions slowed in 2016. Occupancy for stabilized properties was 97.2% as of January, the highest rate among major metros. However, a well-stocked pipeline—with more than 5,000 units expected to come online this year—should provide some relief to the tight housing market. Yardi Matrix expects rent growth to stay above trend at 4.2% in 2017.

Recent Twin Cities Transactions

Excelsior & Grand

City: St. Louis Park, Minn.
Buyer: The Connor Group
Purchase Price: \$100 MM
Price per Unit: \$298,084

The Mark at Eden Prairie

Rent Trends

- Rents in the Twin Cities rose 4.3% year-over-year through February, above the 2.8% national growth rate, according to Yardi Matrix. At \$1,164, the average rent is \$145 shy of the national average. Limited housing supply is a primary driver of rent growth. A drop in new multifamily inventory in 2016, coupled with a steady population growth, has kept occupancy in stabilized properties above the 97% mark. Demand remains solid, and there are a growing number of residents with high-paying jobs who prefer renting to owning.
- Rent growth in the lower-end segment has consistently outperformed over the last two years. Renter-by-Necessity rents rose 4.6% year-over-year to \$1,021, while Lifestyle rents increased 2.8% to \$1,516.
- The submarkets with the largest rent increases were Lakeville (10.0%), Savage (9.9%) and Cambridge (9.3%). The St. Paul – St. Anthony (\$1,889), St. Paul – West Seventh (\$1,646) and Minneapolis – Calhoun Isle (\$1,623) submarkets had the highest average rents.
- The lack of market-rate units in the urban core will continue to promote rent growth, as the increase in new supply will not meet demand. Yardi Matrix expects demand to remain elevated in the near future, and rents are forecast to grow by 4.2% in 2017.

Economic Snapshot

- The Twin Cities added 29,700 jobs last year. Although the metro's 1.7% job growth in 2016 was below the 2.4% national average, the metro boasts one of the lowest unemployment rates in the U.S. Education and health services (14,700) and professional and business services (12,600) led job growth.
- Employers benefit from the influx of graduates from area universities, including the University of Minnesota and the University of St. Thomas. The medical industry is attracting young professionals, in part due to Mayo Clinic's 20-year, \$6.5 billion plan to establish Rochester as a global biotech hub. Employees are also needed in the transportation and construction sectors, as Minneapolis prepares to host the Super Bowl in February 2018 and the ESPN X Games in 2017 and 2018.
- Demand for Class A office is rising, especially in downtown Minneapolis, as a growing number of businesses move into the city from suburban office parks and commit to longer leases. Available inventory is being reduced as higher-yield-seeking investors have begun converting old office buildings such as Sibley Square at Mears Park in St. Paul to apartments. Office vacancy is expected to tighten and reach its lowest level in a decade. Shorenstein Properties LLC sold the City Center office tower for a record \$315 million, which signals a growing interest from institutional investors.

Demographics

Affordability

- Home prices have steadily risen during the current expansion as a result of a limited supply of single-family homes. The median home value hit \$222,253 last year, its highest level since 2011. Despite rising home prices, the average mortgage comprises just 13% of the area's median income.
- Renting—which accounts for 18% of the metro's median income—remains less affordable than owning. The city of Minneapolis has launched an Affordable Housing Initiative, which is meant to generate affordable units through new construction or conversions to residents that earn 30% to 60% of the area's median income.

Population

- The Twin Cities population increased by 0.8% in 2015, in line with the national average.
- Over the past five years, the metro's population grew by roughly 135,000.

Twin Cities vs. National Population

	2011	2012	2013	2014	2015
National	311,718,857	314,102,623	316,427,395	318,907,401	321,418,820
Minneapolis-Wis. Metropolitan Statistical Area	3,389,626	3,423,250	3,460,826	3,495,656	3,524,583

Sources: U.S. Census, Moody's Analytics

Supply

- Some 2,600 units were completed in 2016, increasing supply by 1.4%, well below the 2.5% national average. New deliveries have declined sharply since peaking in 2014; however, completions are expected to rebound, with more than 5,000 units scheduled to come online in 2017.
- Significant development will continue for the next few years, as roughly 10,000 units were under construction as of February, out of a total pipeline of more than 30,000 units. Absorption is likely to remain strong, as the metro has consistently maintained among the highest occupancy rates in the U.S. As of January 2017, the occupancy rate for stabilized properties was 97.2%.
- Development is concentrated in downtown submarkets such as Minneapolis – University (1,480 units) and Minneapolis – Central (1,147 units). Other submarkets with substantial pipelines include St. Louis Park, Brooklyn Park, Edina/Eden Prairie and St. Paul – Lexington Hamline, each with more than 470 units under construction. The largest project underway is 610 West, a 484-unit community in Brooklyn Park, developed by Doran Cos. and slated for completion in May 2017.

Transactions

- Transaction volume reached \$1.1 billion in the Twin Cities in 2016, marking a new cycle high. Although it remains small for some institutional investors, other buyers have increased their interest in the metro due to strong fundamentals and stable growth.
- The average price per unit rose to \$152,672 in 2016, well above the \$133,902 national average. Assets trading in the southern submarkets of Eden Prairie, Burnsville and St. Louis Park were among the most coveted, totaling \$389 million in sales.
- The largest transaction over the past year was The Connor Group's \$100 million purchase of the 337-unit Excelsior & Grand in eastern St. Louis Park. The mixed-use, amenity-rich, TOD development traded for \$298,084 per unit, nearly doubling the metro's average.

Definitions

Lifestyle households (renters by choice) have wealth sufficient to own but have chosen to rent. Discretionary households, most typically a retired couple or single professional, have chosen the flexibility associated with renting over the obligations of ownership.

Renter-by-Necessity households span a range. In descending order, household types can be:

- *A young-professional, double-income-no-kids household* with substantial income but without wealth needed to acquire a home or condominium;
- *Students*, who also may span a range of income capability, extending from affluent to barely getting by;
- *Lower-middle-income (“gray-collar”) households*, composed of office workers, policemen, firemen, technical workers, teachers, etc.;
- *Blue-collar households*, which may barely meet rent demands each month and likely pay a disproportionate share of their income toward rent;
- *Subsidized households*, which pay a percentage of household income in rent, with the balance of rent paid through a governmental agency subsidy. Subsidized households, while typically low income, may extend to middle-income households in some high-cost markets, such as New York City;
- *Military households*, subject to frequency of relocation.

These differences can weigh heavily in determining a property’s ability to attract specific renter market segments. The five-star resort serves a very different market than the down-and-outer motel. Apartments are distinguished similarly, but distinctions are often not clearly definitive without investigation. The Yardi® Matrix Context rating eliminates that requirement, designating property market positions as:

Market Position	Improvements Ratings
Discretionary	A+ / A
High Mid-Range	A- / B+
Low Mid-Range	B / B-
Workforce	C+ / C / C- / D

The value in application of the Yardi® Matrix Context rating is that standardized data provides consistency; information is more meaningful because there is less uncertainty. The user can move faster and more efficiently, with more accurate end results.

The Yardi® Matrix Context rating is not intended as a final word concerning a property’s status—either improvements or location. Rather, the result provides reasonable consistency for comparing one property with another through reference to a consistently applied standard.
